Reasons For Allowance

The prior art of record does not disclose or fairly suggest an ophthalmic system comprising two treatment apparatuses, each capable of independent operation with its own controller and footswitch, the two units connected via a communications unit whereby the actuating means for each may operate the other as controlled by algorithms that only allow cross operations when the mode selection and affirmation of communications integrity permit. U.S. Patent 6,117,126 to Applebaum et al. discloses a system for controlling a plurality of ophthalmic instruments and providing communications between the instruments, however, the instruments are not configured, nor are they available for independent operation.
